### ABOUT

I am a full-stack software developer with an interest in UI/UX design. I have a background in psychology research and work experience in customer service. I am creative, organized, and passionate about developing code that works for all users.

### PERSONAL PROJECTS

#### The Light Side of the Force

The Light Side of the Force is a **REACT** application which offers self-help content, presented through the lens of Star War Jedi. It's built with a local **JSON API** and styled entirely with **CSS**.

#### Nutshell

Nutshell is a **REACT** social media application with articles, friends, messages, tasks, and events. I was responsible for implementing both friends and messages. The friend list only shows friends for the logged in user. A new message automatically posts a timestamp and the author's name, then sorts the messages by timestamp.

#### Sprinkles of Joy

Sprinkles of Joy is a **javascript** app that was already built out with broken code and many errors. My teammate and I worked together to debug the code, then worked on implementing new features to meet MVP, and refactor the code layout to make the application user-friendly.
